EDUCATION

Brigham Young University

- B.S. Computer Science: Software Engineering / December 2027
- Senior with a 3.97 GPA
- Member of the Women in Computer Science Club

SKILLS

- Languages: TypeScript, Java, Python, C/C++
- Libraries/Frameworks: Angular, React, Scikit-learn, Statsmodels
- Tools: Prisma, Git/GitHub, VS Code, JetBrains IDEs, Lucid Software, Figma
- Concepts: Object-Oriented Design, Data Structures, Data Modeling, Data Analysis, Relational Databases

PROJECTS:

Multiplayer Chess Server

- Built a medium-scale chess server with Java, focusing on applying core design principles
- Designed an interactive command-line REPL interface with user input validation
- Stored user, authentication, and game data in MySQL for persistent storage
- Designed 6 HTTP endpoints to allow communication between a client and the server
- Used WebSocket to allow live communication between clients during gameplay
- Utilized unit testing practices to ensure methods performed correctly

Soundscope

- Designed and built a full-stack AWS application that allows users to search and rate albums, as well as view community ratings
- Used React, HTML, and CSS to build a modular frontend
- Integrated with the Spotify API to search its database and retrieve album data using a token for authorization
- Implemented 6 API endpoints to support user creation, authorization, and album rating functionality
- Stored user authorization information and album reviews in a database using MongoDB

Datalog Interpreter

- Built a Python-based Datalog program interpreter applying discrete mathematics
- Implemented lexical analysis using finite state machines to tokenize Datalog input
- Used a fixed-point algorithm to evaluate rules and queries on a relational database
- Built a top-down recursive-descent parser using an LL(1) grammar to validate program structure

Spotify Data Modeling and Analysis

- Built and fine-tuned a linear regression model, with higher-order and interaction terms, for the Spotify dataset
- Explored and analyzed a dataset with both binary and numerical variables
- Used a train and test set to improve model predictive power on new data

OTHER EXPERIENCE

BYU FHSS Computing Services Student Full-Stack Web Developer / June 2026 – Present

- Implement backend tRPC procedures to retrieve data from PostgreSQL databases using Prisma
- Develop modular frontend web pages, and reactive features with HTML, CSS, Angular, and TypeScript
- Collaborate with other developers, designers, and supervisors to translate client requirements into features

Magleby's Fresh Lindon Assistant Manager / September 2020 – Present

- Promoted from cashier to shift lead, then to assistant manager by demonstrating leadership, organizational ability, strong work ethic, and effective communication skills
- Fostered team morale while training new employees and oversaw daily operations in a fast-paced environment
